EDISON
Data Science Competence Framework (CF-DS)

Yuri Demchenko
University of Amsterdam

EDISON Workshop on Data Infrastructure Competences and Skills
9 February 2016, Brussels
Outline

- EDISON Project approach
  - From Data Science Competences to Body of Knowledge and Model Curriculum
- Background: Existing frameworks and standards
  - e-CF3.0 overview and analysis
  - CWA ICT profiles and mapping to e-CF3.0
- Data Science essential competences and skills
  - Used approach and data/information selection
- Organisational processes and role of Data Scientist
- Further steps - Survey and questionnaires
EDISON Objectives

Objective 1: Data Science Curricula Foundation
Promote the creation of *Data Scientists curricula* by an increasing number of universities and professional training organisations.

- The **Data Science Competence Framework (CF-DS)** including Taxonomy of competences and skills, compliant with e-CF3.0.
- The **Body of Knowledge (BoK) for the Data Science (DS-BoK)** that will map required competencies/skills and existing academic, research and technology disciplines.
- A **Model Curriculum for Data Science (MC-DS)** as a template for building customisable Data Science curricula based on the proposed CF-DS and DS-BoK.

Objective 2: Education and Training Environment
Provide environment for **re-skilling and certifying** Data Scientists expertise to graduates, practitioners and researchers throughout their careers.

- Create EDISON **Online Education Environment (EOEE)** powered by **Education and Training Marketplace (ETMp)** leveraging EGI Engage Training Marketplace.

Objective 3: Sustainability Model
Develop a **sustainable business model** and a **roadmap** for European education and training on Data Science competences and skills, provide a basis for the formal recognition of the Data Scientist as a new profession.

- Establish networks and community of **champion universities**.
- Create Community of practice for sustainable Data Science education and training supported by **EDISON Liaison Group(s)**
Basic methodology of EDISON: Development flow, work packages, and products
Background EU Competence Frameworks and Profiles

- e-CFv3.0 - European e-Competence framework for IT
- CWA 16458 (2012): European ICT Professional Profiles Family Tree
- ESCO (European Skills, Competences, Qualifications and Occupations) framework
EDISON Approach: e-CFv3.0 and CF-DS

- Competence Framework for Data Science (CF-DS) definition will be built based on European e-Competence framework for IT (e-CFv3.0)
  - Linking *scientific research lifecycle*, organizational roles, competences, skills and knowledge
  - Defining *Data Science Body of Knowledge (DS-BoK)*
  - Mapping CF-DS and DS-BoK to academic disciplines in a DS *Model Curriculum (MC-DS)*

- Multiple use of e-CFv3.0 within ICT organisations
- Provides basis for individual career path, competence assessment, training and certification

- EDISON CF-DS will be used for defining DS-BoK and MC-DS, linking organizational functions and required knowledge
- Provide basis for individual (self) training and certification
European e-Competence Framework 3.0 overview

<table>
<thead>
<tr>
<th>Dimension 1</th>
<th>Dimension 2</th>
<th>Dimension 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 e-CF areas (A–E)</td>
<td>40 e-Competences identified</td>
<td>e-Competence proficiency levels e-1 to e-5, related to TQP levels 3–8</td>
</tr>
</tbody>
</table>

A. PLAN
- A.1. IS and Business Strategy Alignment
- A.2. Service Level Management
- A.3. Business Plan Development
- A.5. Architecture Design
- A.6. Application Design
- A.7. Technology Trend Monitoring
- A.8. Sustainable Development
- A.9. Innovating

B. BUILD
- B.1. Application Development
- B.2. Component Integration
- B.3. Testing
- B.4. Solution Deployment
- B.5. Documentation Production
- B.6. Systems Engineering

C. RUN
- C.1. User Support
- C.2. Change Support
- C.3. Service Delivery
- C.4. Problem Management

D. ENABLE
- D.1. Information Security Strategy Development
- D.2. ICT Quality Strategy Development
- D.3. Education and Training Provision
- D.4. Purchasing
- D.5. Sales Proposal Development
- D.6. Channel Management
- D.7. Sales Management
- D.8. Contract Management
- D.9. Personnel Development
- D.10. Information and Knowledge Management
- D.11. Needs Identification
- D.12. Digital Marketing

E. MANAGE
- E.1. Forecast Development
- E.2. Project and Portfolio Management

- 4 Dimensions
  - Competence Areas
  - Competences
  - Proficiency levels
  - Skills and Knowledge

- 5 Competence Area defined by ICT Business Process stages
  - Plan
  - Build
  - Run
  - Enable
  - Manage

-> Refactor to Scientific Research cycle/workflow (and linked to Scientific Data Lifecycle)
  - See example of RI manager at IG-ETRD wiki and meeting

- Each competence has 5 proficiency level
  - Ranging from technical to engineering to management to strategist/expert level

- Knowledge and skills property are defined for/by each competence and proficiency level (not unique)
Definitions (according to e-CFv3.0)

- **Competence** is a demonstrated ability to apply knowledge, skills and attitudes for achieving observable results.
  - Competence vs Competency (e-CF vs ACM)
    - Competence is ability acquired by training or education (linked to learning outcome)
    - Competency is similar to skills or experience (acquired feature of a person)
- Competence is not to be confused with process or technology concepts such as, ‘Cloud Computing’ or ‘Big Data’. These descriptions represent evolving technologies and in the context of the e-CF, they may be integrated as elements within knowledge and skill examples.
- **Knowledge** in the context of competence definition is treated as something to know, to be aware of, familiar with, and obtained as a part of education.
- **Skills** is treated as provable ability to do something and relies on the person’s experience.
1. Define **CF-DS profile** using input from
   a. Demand/Jobs market
   b. Surveys, Interview
   c. Questionnaires
   d. DS programmes
2. Map required **background ICT competences** from e-CF3.0 and ICT profiles
3. Identify required extensions to e-CF3.0
European ICT Profile Family Tree – Generation 1 and 2 as a shared European reference
Mapping between e-CF3.0 and European ICT Profiles

- European ICT Professional Profiles structured by six families and positioned within the ICT Business Process (e-CF Dimension 1)
EDISON Data Science Competence Framework

- How it was made
- 5 main Data Science competences groups
- Skills, tools and languages
- Suggested extensions and identified profiles
- Example: Technical RI competences
Demanded Data Science Competences and Skills: Jobs market analysis

• Source (period Aug – Sept 2015)
  – IEEE Data Science Jobs (World but majority US) (collected > 120, selected for analysis > 30)
  – LinkedIn Data Science Jobs (NL) (collected > 140, selected for analysis > 30)
  – Existing studies and reports + numerous blogs

• Analysis methods
  – Using manually data analytics methods: classification, clustering, expert evaluation
  – Research methods: Data collection - Hypothesis – Artefact - Evaluation

• Observations
  – Many job ads don’t use Data Scientist as a definite profession:
    • Data Science competences/skills are specified as part of traditional ICT professions/positions
  – Many academic openings without specified skills profile
  – Explicit Data Scientist jobs specify wide variety of expected functions/responsibilities and required skills and knowledge
Identified Data Science Competence Groups

• Traditional/known Data Science skills/knowledge profiles include
  – Data Analytics or Business Analytics or Machine Learning
  – Engineering or Programming
  – Subject/Scientific Domain Knowledge

• EDISON identified 2 additional competence groups demanded by organisations
  – Data Management, Curation, Preservation
  – Scientific or Research Methods and vs Business Processes/Operations

• Other skills commonly recognized aka “soft skills” or “social intelligence”
  – Inter-personal skills or team work, cooperativeness

• All groups need to be represented in Data Science curriculum and training
  – Challenging task for Data Science education and training

• Another aspect of integrating Data Scientist into organisation structure
  – General Data Science (or Big Data) literacy for all involved roles and management
  – Common agreed way of communication and information/data presentation
  – Role of Data Scientist: Provide such literacy advice and guiding to organisation
Data Science Competence Groups - Research

Data Science Competence includes 5 areas/groups:
- Data Analytics
- Data Science Engineering
- Domain Expertise
- Data Management
- Scientific Methods (or Business Process Management)

Scientific Methods:
- Design Experiment
- Collect Data
- Analyse Data
- Identify Patterns
- Hypothesise Explanation
- Test Hypothesis

Business Operations:
- Operations Strategy
- Plan
- Design & Deploy
- Monitor & Control
- Improve & Re-design
Data Science Competence Areas – Business e-CF areas

- **Data Analytics**
- **Data Science Engineering**
- **Domain Expertise**
- **Data Management**
- **Scientific Methods** (or Business Process Management)

**Scientific Methods**
- Design Experiment
- Collect Data
- Analyse Data
- Identify Patterns
- Hypothesise Explanation
- Test Hypothesis

**Business Process Operations/Stages**
- Design
- Model/Plan
- Deploy & Execute
- Monitor & Control
- Optimise & Re-design
## Identified Data Science Competence Groups

<table>
<thead>
<tr>
<th>Data Analytics (DA)</th>
<th>Data Management/ Curation (DM)</th>
<th>DS Engineering (DSE)</th>
<th>Ssearch Methods (DSRM) scientfic/Re</th>
<th>DS Domain Knowledge (including Business Apps)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Use appropriate statistical techniques on available data to deliver insights</td>
<td>Develop and implement data strategy</td>
<td>Use engineering principles to research, design, or develop structures, instruments, machines, experiments, processes, systems, theories, or technologies</td>
<td>Create new understandings and capabilities by using the scientific method's hypothesis, test, and evaluation techniques; critical review; or similar engineering research and development methods</td>
<td>Understand business and provide insight, translate unstructured business problems into an abstract mathematical framework</td>
</tr>
<tr>
<td>2 Use predictive analytics to analyse big data and discover new relations</td>
<td>Develop data models including metadata</td>
<td>Develops specialized data analysis tools to support executive decision making</td>
<td>Direct systematic study toward a fuller knowledge or understanding of the fundamental aspects of phenomena and of observable facts, and discovers new approaches to achieve goals</td>
<td>Use data to improve existing services or develop new services</td>
</tr>
<tr>
<td>3 Research and analyze complex data sets, combine different sources and types of data to improve analysis.</td>
<td>Integrate different data source and provide for further analysis</td>
<td>Design, build, operate relational non-relational databases</td>
<td>Undertakes creative work, making systematic use of investigation or experimentation, to discover or revise knowledge of reality, and uses this knowledge to devise new applications</td>
<td>Participate strategically and tactically in financial decisions that impact management and organizations</td>
</tr>
<tr>
<td>4 Develop specialized analytics to enable agile decision making</td>
<td>Develop and maintain a historical data repository of analysis</td>
<td>Develop and apply computational solutions to domain related problems using wide range of data analytics platforms</td>
<td>Apply ingenuity to complex problems, develop innovative ideas</td>
<td>Recommends business related strategic objectives and alternatives and implements them</td>
</tr>
<tr>
<td>5 Collect and manage different source of data</td>
<td>Collect and manage different source of data</td>
<td>Develop solutions for secure and reliable data access</td>
<td>Ability to translate strategies into action plans and follow through to completion.</td>
<td>Provides scientific, technical, and analytic support services to other organisational roles</td>
</tr>
<tr>
<td>6 Visualise complex and variable data.</td>
<td>Visualise complex and variable data.</td>
<td>Develop algorithms to analyse multiple source of data</td>
<td>Influences the development of organizational objectives</td>
<td>Analyse multiple data sources for marketing purposes</td>
</tr>
<tr>
<td>7 Wsh Data Comp&amp;Skills</td>
<td>Prototype new data analytics applications</td>
<td>EDISON CF-DS</td>
<td>Analyse customer data to identify/optimise customer relations actions</td>
<td></td>
</tr>
</tbody>
</table>
Skills/experience related to competences
- Data Analytics and Machine Learning
- Data Management/Curation (including both general data management and scientific data management)
- Data Science Engineering (hardware and software) skills
- Scientific/Research Methods
- Personal, inter-personal communication, team work (also called social intelligence or soft skills)
- Application/subject domain related (research or business)
  - Mathematics and Statistics

Big Data (Data Science) tools and platforms
- Big Data Analytics platforms
- Math& Stats tools
- Databases (SQL and NoSQL)
- Data Management and Curation platform
- Data and applications visualisation
  - No cloud related skills and knowledge mentioned explicitly – To be included

Programming and programming languages and IDE
- General and specialized for data analysis and statistics

Interpersonal skills (social intelligence)
## Identified Data Science Skill Groups

<table>
<thead>
<tr>

Suggested e-CF extensions for DS

A. PLAN and Design
- A.10* Organisational workflow/processes model definition/formalisation
- A.11* Data models and data structures

B. BUILD: Develop and Deploy/Implement
- B.7* Apply data analytics methods (to organizational processes/data)
- B.8* Data analytics application development
- B.9* Data management applications and tools
- B.10* Data Science infrastructure deployment

C. RUN: Operate
- C.5* User/Usage data/statistics analysis
- C.6* Service delivery/quality data monitoring

D. ENABLE: Use/Utilise
- D10. Information and Knowledge Management (powered by DS)
- D.13* Data presentation/visualisation, actionable data extraction
- D.14* Support business processes/roles with data and insight (support to D.5, D.6, D.7, D.12)
- D.15* Data management/preservation/curation with data and insight

E. MANAGE
- E.10* Support Management and Business Improvement with data and insight (support to E.5, E.6)
- E.11* Data analytics for (business) Risk Analysis/Management (support to E.3)
- E.12* ICT and Information security monitoring and analysis (support to E.8)
Need for separate Data Science Competence Framework definition?

• There is no direct mapping of required/identified DS competences and skills to e-CF areas (i.e. organizational workflow stages)
  – Data Scientist is involved into all stages/areas
  – In most cases Data Scientist competences are connected to Data Lifecycle and not organizational workflow

• Data Scientist is a cross-intra-organizational role
  – Interact with different roles
  – Deliver information to top management

• Initially assistive but may play key (leading) role in data driven organizational processes and services
  – Potentially may have best organizational insight
  – Provide a basis for a future CEO mindset

• e-CF3.0 extensions with specific Data Science competences as a first step
Data Scientist and Subject Domain Specialist

- **Subject domain components**
  - Model (and data types)
  - Methods
  - Processes
  - Domain specific data and presentation/visualization methods
  - Organisational roles and relations

- **Data Scientist is an assistant to Subject Domain Specialists**
  - Translate subject domain Model, Methods, Processes into abstract data driven form
  - Implement computational models in software, build required infrastructure and tools
  - Do (computational) analytic work and present it in a form understandable to subject domain
  - Discover new relations originated from data analysis and advice subject domain specialist
  - Interact and cooperate with different organizational roles to obtain data and deliver results and/or actionable data
Data Science and Subject Domains

Data Science domain components

Data structures & databases/storage
- Abstract data driven math&compute models
- Data Analytics methods
- Data and Applications Lifecycle Management

Cross-organisational assistive role

Domain specific components

Domain specific data & presentation
- Models (and data types)
- Methods
- Processes

Organisational roles

Data Scientist functions is to translate between two domains
Possible Data Scientist profiles/roles
(as extension to CWA16458 (2012) or ESCO)

• Data Analytics
  – Data Mining
  – Machine Learning
• Data Management
  – Digital Librarian, Data Archivist, Data Curator
• Data Science Engineering
  – Data Analytics applications development
  – Scientific programmer
  – Data Science/Big Data Infrastructure engineer/developer/operator
• Data Science Researcher
  – Data Science creative
  – Data Science consultant/Analyst
• Business Analyst
• Data Scientist in subject/research domain

• Research e-Infrastructure brings its own specifics to required competences and skills definition
Mapping Data Scientist Competences to e-CF3.0

• Use e-CF to identify
  – ICT/CS background competences/skills/knowledge
  – Required basic education and training

• Use Data Science CF-DS to define additional training/re-skilling
  – From general ICT/(Librarian) to Data Scientist
    • Specialised Data Science courses
  – From Data Scientist practitioner to certified Data Scientist
    • General IT and CS courses
EXAMPLE: e-CF Dimensions for RI Technical (based on RDA IG-ETRD work)

- Dimension 1: 5 e-Competence areas, derived from the ICT processes present in RI development, management and operation:
  A. PLAN and DESIGN
  B. DEVELOP and DEPLOY/IMPLEMENT (BUILD)
  C. OPERATE (RUN)
  D. USE: UTILISE (ENABLE)
  E. MANAGE

- Dimension 2: A set of reference competences for each area; currently identified 35 competences that are mapped from the general eCFv3.0.

- Dimension 3: Proficiency levels of each e-Competence, currently using e-CF approach that provides European reference level specifications on e-Competence levels e-1 to e-5, which are related to the EQF levels 3 to 8.
  - Increasing number of practicing data scientists have master degree and higher

- Dimension 4: Samples of knowledge and skills related to e-Competences in dimension 2. They will be provided to add value and context and are not intended to be exhaustive.
  - Knowledge identification is important to build Body of Knowledge
EXAMPLE: How to use e-CF for New Profile of RI
Technical

A. PLAN and DESIGN
   A.2. Service Level Management
   A.3. Product / Service Planning
   A.5. Application Design
   A.4. Architecture Design

Additional
   A.6. Sustainable Development
   A.7. Innovating and Technology Trend Monitoring
   A.8. Business/Research Plan Development and Grant application
   A.1. RI and Research Strategy Alignment

B. BUILD: DEVELOP and DEPLOY/IMPLEMENT
   B.1. Application Development (Reqs Engineering, Function Specs, API, HCI)
   B.2. Component Integration
   B.3. Testing (RI services and Sci Apps)
   B.4. Solution/Apps Deployment

Additional
   B.5. Documentation Production
   B.6. Systems Engineering (DevOps)

C. OPERATE (RUN)
   C.1. User Support
   C.2. Service Delivery
   C.3. Problem Management

Additional
   C.4. Change Support (Upgrade/Migration)

D. USE: UTILISE (ENABLE)
   D.1. Scientific Applications Integration (on running RI)
   D.5. Data collection and preservation
   D.4. New requirements and change Identification
   D.6. Education and Training Provision

Additional
   D.2. Information Security Strategy Development
   D.3. RI/ICT Quality Strategy Development
   D.7. Purchasing/Procurement
   D.8. Contract Management
   D.9. Personnel Development
   D.10. Dissemination and outreach

E. MANAGE
   E.1. Overall RI management (by systems and components)
   E.5. Information/Data Security Management

Additional
   E.6. Data Management (including planning and lifecycle management, curation)
   E.4. RI Security and Risk/Dependability Management
   E.2. Project and Portfolio Management
   E.3. ICT Quality Management and Compliance
   E.7. RI/IS Governance
Further Steps

• Define a taxonomy and classification for DS competences and skills as a basis for more formal CF-DS definition
  – Closer look at skills, tools and platforms
• Create a Questionnaire and run Survey using CF-DS vocabulary
  – Run surveys for target communities
    https://www.surveymonkey.com/r/EDISON_project-Defining_Data_science_profession
  – Plan a number of key interviews, primarily experts and top executives at universities and companies
• Proceed with suggested e-CF3.0 extensions and participate in the next e-CF meetings (April and June 2016)
  – Provide feedback and contribution to ESCO
  – Talk to national e-CF bodies or adopters if available
• Suggest ACM2012 Classification extensions and contact ACM people
• Provide input to DS-BoK definition following from CF-DS
  – Link/Map to taxonomy of academic and educational and training courses
• Create open community forum to collect contribution
  – CF-DS document is on public comments available from EDISON website
  – Start related Social Network groups to promote already obtained results and obtain feedback and community contribution
Survey

EDISON project: Defining Data science profession

Introduction

Purpose:
The questionnaire is going to be used in the context of the EDISON project to identify emerging Data Science profession. The term Data Science is an umbrella term that is required during the data life cycle. Data science is a combination of science, engineering, and domain expertise.

The questionnaire will help EDISON consortium to respond to the following questions:
- What are the competencies required of a Data Scientist in any field of work (mainly infrastructure)?
- What are the specific competences that are required to be a Data Scientist in each specific field?
- What are the career path(s) followed to become a Data Scientist?
- What are the specific competences requested by the employers for the Data Scientist role?
- What are the trends in future Data Scientist positions?

Duration of survey and length of questionnaire:
29 min

Guarantee of confidentiality:
Data collected will be anonymized and used according to the European data privacy regulations.

EDISON project:
The project is H2020 EU funded project to identify the skills and competences required information can be found on the project website: http://edison-project.eu

Survey structure:
Section 1: About the respondent institution
Section 2: About the respondent
Section 3: Role and activities of the data scientist
Section 4: Training of the Data Scientist
Section 5: Data Analytics
Section 6: Data Management and Curation
Section 7: Data Science Engineering
Section 8: Research Infrastructure Management and Operation
Section 9: Scientific and Research methods
Section 10: Domain related expertise
Section 11: Communication and interdisciplinary expertise

EDISON project: Defining Data science profession

Data Analytics skills and competencies for data science profession

19. What are the competencies and skills a data scientist should have on data analytics?

<table>
